Each run below corresponds to prediction or workflow execution. It documents tool identity, configuration and produced artifacts.

Runs

Mosbi v0

#1 | App Prediction | Mosbi | Status: FINISHED

MoSBi (Molecular Signature identification using Biclustering) is a comprehensive framework for identifying biclusters in molecular data. It uses multiple biclustering algorithms and provides robust methods for evaluating and visualizing the results.

Configuration

n_randomizations
Number of randomizations for cut-off estimation.
`5`

margin
Margin for similarity computation
`both`

metric
Similarity metric
`Bray-Curtis`

n_steps
Number of points where the cut-off is evaluated
`100`

sn_ratio
Compute signal-to-noise ratio if True, else use error_threshold
`true`
